Dropped Objects Training

Putting Safety First with Every Operation

At Work:

“Dropped Objects are among the Top 10 causes of Fatality and Serious Injury in the Oil and Gas Industry”

At Home and At Leisure:

“The top three causes of fatal accidents are... falls from height...being struck by moving vehicles...and being struck by falling objects” (OSHA)

Safety has become a high priority in the Oil & Gas Industry. OCS has developed a Dropped Objects Training Program that will ensure that safety policies meet both IADC HSE Guidelines and API Recommended Practices.

Our Aim

We will look at different types of locking methods and how each method varies and the best method for the right equipment, the secondary fastening method, also look at how to inspect the equipment safely.

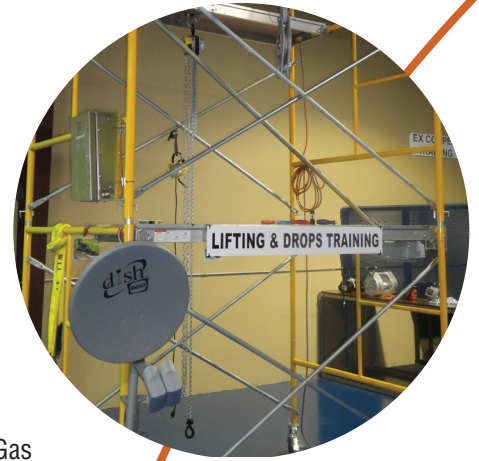

The course will also cover how to monitor all equipment within the derrick and all tools that are carried into the structure and their securing to personnel.

With our purpose built training tower we will carry out a “**HAZARD HUNT**” looking for defects that are commonly seen within a drilling operation

Start Today – Contact us to discuss how we can assist you with your Dropped Objects training needs.

About OCS Group

The OCS Group is comprised of several respected engineering and consulting companies serving the international oil and gas industry and other industrial markets. From providing project management and commissioning services to safety training, our companies offer the experience and expertise required to solve our clients’ most complex technical challenges. The OCS Group currently includes Offshore Commissioning Solutions (OCS), OCS Training Institute and OCS Software & Engineering Solutions.
